Amendments to the Claims

Please amend Claims 1, 3-5, 7-15 and 17-20. The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

1. (Currently Amended) A headgear system comprising:

a headgear with an upper headgear portion for being worn on a user's head and a lower headgear portion extending from the upper headgear portion for extending forwardly relative to a lower front portion of the user's head and below the user's eyes; and

a display assembly mounted inside the headgear of the headgear system to the lower headgear portion for being located below at least one of the user's eyes ~~so as not to obstruct the user's vision~~, the display assembly having an adjustable mount and a viewing display mounted to the adjustable mount with direct viewing optics facing the user and positioned inward from the lower headgear portion for displaying an item of information, the direct viewing optics being located on the adjustable mount in a position for being below the user's eyes ~~so that for distance vision, line of sight of the user passes over the direct viewing optics~~, the item of information being visible when said at least one of the user's eyes looks downwardly at the viewing display where the direct viewing optics face ~~and are substantially inline with~~ said at least one of the user's downwardly looking eyes, the display assembly being configured to be adjustable by the user while the headgear system is worn by the user for changing an orientation of the viewing display and the direct viewing optics, the display assembly having a first rotatable joint that is rotatable about a rotatable horizontal axis relative to said headgear and said at least one of the user's eyes for allowing the viewing display to be tilted upwardly and downwardly, and the first rotatable joint extending upwardly from a second rotatable joint that is rotatable about a rotatable vertical axis fixed relative to said headgear and in front of said at least one of the user's eyes for allowing the viewing display to rotate about the vertical axis, the viewing display being supported by the first rotatable joint between upright side

10/647,059

- 3 -

members that extend upright from the second rotatable joint and surround the vertical axis on opposing sides.

2. (Original) The headgear system of Claim 1 in which the headgear is a helmet, and the lower headgear portion is a face bar.
3. (Currently Amended) The headgear system of Claim 2 in which ~~the display assembly includes at least one rotatable joint having~~ of the joints have a frictional resistance so that ~~the joint said at least one of the joints~~ remains in a particular said orientation until moved by the user.
4. (Currently Amended) The headgear of Claim 3 in which the viewing display is sized for viewing by one of the user's eyes ~~when said one of the user's eyes looks downwardly.~~
5. (Currently Amended) The headgear of Claim 4 in which the viewing display displays images which are focused ~~to appear to be~~ at optical infinity.
6. (Cancelled)
7. (Currently Amended) The headgear system of Claim 3 in which the display assembly comprises:
 - a base for mounting to the face bar of the helmet, the base having a circular recess that is connected to an entrance slot;
 - a rotatable member having at least a partial circular portion that has a snap fit into the circular recess of the base through the entrance slot, the rotatable member being rotatable within the circular recess about the vertical axis; and
 - [[two]] the upright side members extending from the rotatable member, the viewing display being rotatably mounted between the upright side members along the horizontal axis.
8. (Currently Amended) The headgear system of Claim [[7]] 2 in which the display assembly is mounted to the face bar of the helmet for being below one of the user's eyes ~~a first eye of the user~~, the headgear system further comprising a second base mounted to

10/647,059

- 4 -

the face bar of the helmet for being below another of the user's eyes ~~a second eye of the user~~ to allow the user to select the position of ~~at least one~~ said viewing display by snap fitting an associated rotatable member into the desired base.

9. (Currently Amended) A headgear system comprising:

a headgear for being worn by a user; and

a display assembly having a viewing display mounted to the headgear of the headgear system, the display assembly being configured to be adjustable by the user while the headgear system is worn by the user for changing an orientation of the viewing display, the display assembly having a first rotatable joint that is rotatable about a rotatable horizontal axis relative to said headgear and at least one of the user's eyes for allowing the viewing display to be tilted upwardly and downwardly, and the first rotatable joint extending upwardly from a second rotatable joint that is rotatable about a rotatable vertical axis fixed relative to said headgear and in front of said at least one of the user's eyes for allowing the viewing display to rotate about the vertical axis, the viewing display being supported by the first rotatable joint between upright side members that extend upright from the second rotatable joint and surround the vertical axis on opposing sides.

10. (Currently Amended) The headgear system of Claim 9 in which the display assembly comprises:

a base for mounting to the headgear, the base having a circular recess that is connected to an entrance slot;

a rotatable member having at least a partial circular portion that has a snap fit into the circular recess of the base through the entrance slot, the rotatable member being rotatable within the circular recess about the vertical axis; and

[[two]] the upright side members extending from the rotatable member, the display being rotatably mounted between the upright side members along the horizontal axis.

- 5 -

11. (Currently Amended) A method of displaying an item of information to a user comprising:

providing the user with a headgear having an upper headgear portion for being worn on the user's head and a lower headgear portion extending from the upper headgear portion for extending forwardly relative to a lower front portion of the user's head and below the user's eyes; and

mounting a display assembly inside ~~[[the]]~~ said headgear to the lower headgear portion below at least one of the user's eyes ~~so as not to obstruct the user's vision~~, the display assembly having an adjustable mount and a viewing display mounted to the adjustable mount with direct viewing optics facing the user and positioned inward from the lower headgear portion for displaying the item of information, the direct viewing optics being located on the adjustable mount in a position for being below the user's eyes ~~so that for distance vision, line of sight of the user passes over the direct viewing optics~~, the item of information being visible when said at least one of the user's eyes looks downwardly at the viewing display where the direct viewing optics face ~~and are substantially inline with~~ said at least one of the user's downwardly looking eyes, the display assembly being configured to be adjustable by the user while the headgear is worn by the user for changing an orientation of the viewing display and the direct viewing optics for viewing, the display assembly having a first rotatable joint that is rotatable about a rotatable horizontal axis relative to said headgear and said at least one of the user's eyes for allowing the viewing display to be tilted upwardly and downwardly, and the first rotatable joint extending upwardly from a second rotatable joint that is rotatable about a rotatable vertical axis fixed relative to said headgear and in front of said at least one of the user's eyes for allowing the viewing display to rotate about the vertical axis, the viewing display being supported by the first rotatable joint between upright side members that extend upright from the second rotatable joint and surround the vertical axis on opposing sides.

12. (Currently Amended) The method of Claim 11 further comprising providing the user with a helmet as the headgear ~~that is a helmet~~, and the lower headgear portion being a face bar.

10/647,059

13. (Currently Amended) The method of Claim 12 further comprising providing ~~the display assembly with~~ at least one ~~rotatable joint having~~ of the joints with a frictional resistance so that ~~the joint~~ said at least one of the joints remains in a ~~particular~~ said orientation until moved by the user.
14. (Currently Amended) The method of Claim 13 further comprising sizing the viewing display for viewing by one of the user's eyes ~~when said one of the user's eyes looks downwardly.~~
15. (Currently Amended) The method of Claim 14 further comprising displaying images on the viewing display which are focused ~~to appear to be~~ at optical infinity.
16. (Cancelled)
17. (Currently Amended) The method of Claim 13 further comprising:
providing the display assembly with a base for mounting to the face bar of the helmet, the base having a circular recess that is connected to an entrance slot, a rotatable member having at least a partial circular portion being snap fit into the circular recess of the base through the entrance slot, the rotatable member being rotatable within the circular recess about the vertical axis, the viewing display being rotatably mounted between ~~[[two]]~~ the upright side members which extend[[ing]] from the rotatable member, along the horizontal axis.
18. (Currently Amended) The method of Claim ~~[[17]]~~ 12 further comprising:
positioning the display assembly to the face bar of the helmet below one of the user's eyes ~~a first eye of the user~~; and
providing a second base mounted to the face bar of the helmet below another of the user's eyes ~~a second eye of the user~~ to allow the user to select the position of at least ~~one~~ said viewing display by snap fitting an associated rotatable member into the desired base.

10/647,059

19. (Currently Amended) A method of displaying an item of information to a user comprising:

providing the user with a headgear for being worn on the user's head; and

mounting a display assembly having a viewing display for displaying the item of information to the headgear, the display assembly being configured to be adjustable by the user while the headgear is worn by the user for changing an orientation of the viewing display for viewing, the display assembly having a first rotatable joint that is rotatable about a rotatable horizontal axis relative to said headgear and at least one of the user's eyes for allowing the viewing display to be tilted upwardly and downwardly, and the first rotatable joint extending upwardly from a second rotatable joint that is rotatable about a rotatable vertical axis fixed relative to said headgear and in front of said at least one of the user's eyes for allowing the viewing display to rotate about the vertical axis, the viewing display being supported by the first rotatable joint between upright side members that extend upright from the second rotatable joint and surround the vertical axis on opposing sides.

20. (Currently Amended) The method of Claim 19 further comprising providing the display assembly with a base for mounting to the headgear, the base having a circular recess that is connected to an entrance slot, a rotatable member having at least a partial circular portion being snap fit into the circular recess of the base through the entrance slot, the rotatable member being rotatable within the circular recess about the vertical axis, the display being rotatably mounted between [[two]] the upright side members which extend~~[[ing]]~~ from the rotatable member, along the horizontal axis.
